

X-U General Purpose Nails for Concrete and Steel

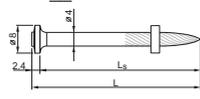

Product data

Dimensions

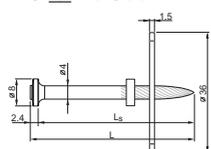

X-U __ MX

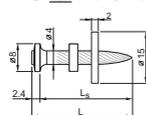

X-U __ P8

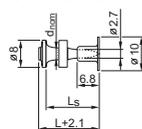

X-U __ P8 S36

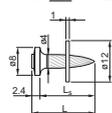

X-U __ P8 S15

X-U 15 P8TH

X-U __ S12

General information

Material specifications

Carbon steel shank:	HRC 58
	HRC 59 (X-U 15)
Zinc coating:	5-13 µm

Fastening tools

See fastener selection

Approvals

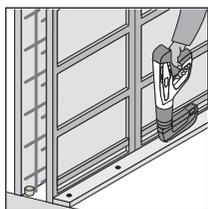

ICC ESR-2269 (USA)

DIBt Z-14.4-517 (Germany)

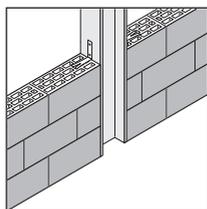

Note: technical data presented in these approvals and design guidelines reflect specific local conditions and may differ from those published in this handbook.

Applications

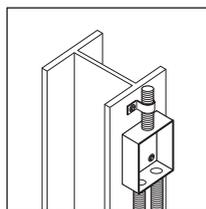

Examples

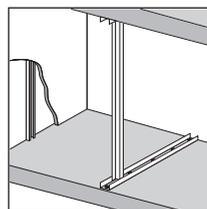

System formwork

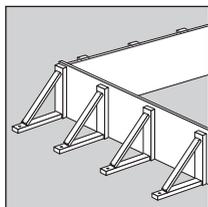

Wall-tie to steel and concrete

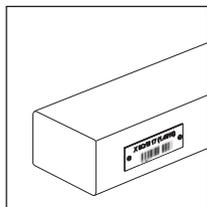

Mechanical and electrical fixtures

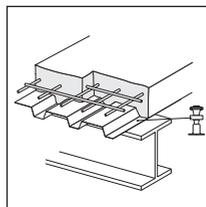

Drywall track to concrete and steel

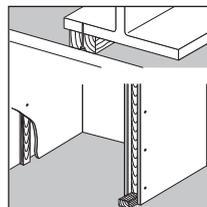

Conventional formwork

Tagging labels

Tacking of metal decks

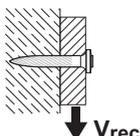

Sill plates / 2x4 wood to concrete and steel

The intended use for safety relevant and permanent applications only comprises fastenings which are not directly exposed to external weather conditions or moist atmospheres.

Fastenings to concrete

Recommended loads

Loads depending on embedment depth h_{ET} :

$$N_{rec} = V_{rec} = 0.4 \text{ kN for } h_{ET} \geq 27 \text{ mm}$$

$$N_{rec} = V_{rec} = 0.3 \text{ kN for } h_{ET} \geq 22 \text{ mm}$$

$$N_{rec} = V_{rec} = 0.2 \text{ kN for } h_{ET} \geq 18 \text{ mm}$$

$$N_{rec} = V_{rec} = 0.1 \text{ kN for } h_{ET} \geq 14 \text{ mm}$$

Design conditions:

- For safety relevant fastenings sufficient redundancy of the entire system is required: Minimum 5 fastenings per fastened unit.
- All visible failures must be replaced.
- Valid for concrete with strength of $f_{cc} \leq 45 \text{ N/mm}^2$.
- Valid for predominantly static loading.
- Failure of the fastened material is not considered in recommended loads
- To limit penetration of nail and to increase pull-over load, use nails with washers.

Test data (Examples)

Important note: test data are for information only and cannot be used for design. These data are examples and do not represent the whole range of applications and load cases.

Design data for Hilti standard nails in concrete are based on a specific statistical evaluation method taking into consideration high variation coefficients. The evaluation procedure is described in the **Direct Fastening Principles and Technique** section of this manual.

For more detailed information please contact Hilti.

Pull-out loads

Nails	Mean ultimate pull-out loads $N_{u,m}$ [kN]	Variation coefficient [%]	Embedment depth h_{ET} [mm]	Concrete strength f_{cc} [N/mm ²]
X-U 22	3.18	37.8	20.1	54.7
X-U 27	4.04	35.4	24.5	30.9

Application requirements

Thickness of base material

Concrete:

$h_{min} = 80 \text{ mm}$

Thickness of fastened material

Wood:

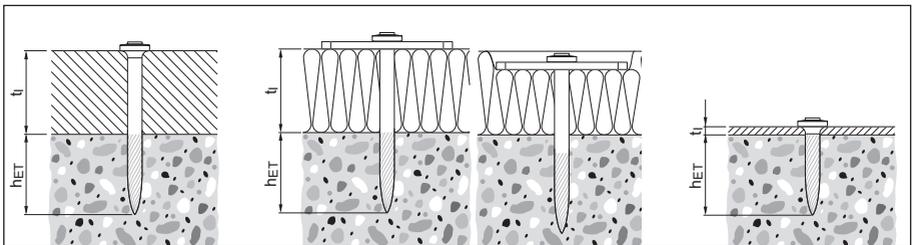

$t_f = 15\text{--}57 \text{ mm}$

Fastener selection and system recommendation

Fastening to concrete

Required nail shank length: $L_S = h_{ET} + t_f$ [mm]

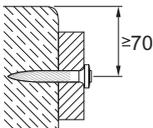

Recommendation: $h_{ET} = 22 \text{ mm}$

In case flush fastenings are required:

$$L_S = h_{ET} + t_f - 5 \text{ [mm]}$$

Edge distance

Edge distance: $c \geq 70 \text{ mm}$

Cartridge recommendation

Tool energy adjustment by setting tests on site

Fastening to concrete: **6.8/11M yellow cartridge** on green/ fresh and standard concrete
6.8/11M red cartridge on precast, old and hard concrete

Fastenings to steel

Recommended loads

Fastening of steel sheets and other steel parts with X-U 16 and X-U 19

Recommended loads t_f [mm]	X-U_P8/MX N_{rec} [kN]	X-U_S12 N_{rec} [kN]	V_{rec} [kN]
0.75	1.0	1.4	1.2
1.00	1.2	1.8	1.8
1.25	1.5	2.2	2.6
≥ 2.00	2.0	2.2	2.6

Tacking of steel sheets with X-U 15

according to ECCS-recommendation N73, "Good Construction Practice for Composite Slabs

Recommended loads

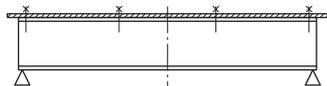

t_f [mm]	N_{rec} [kN]	V_{rec} [kN]
0.75–1.25	0.6	0.8

Design conditions:

- Recommended working loads valid for steel sheet with minimum tensile strength $\geq 360 \text{ N/mm}^2$.
- For intermediate sheet thicknesses, use recommended load for next smaller thickness.
- In case of a design based on the characteristic resistance, recommended values have to be multiplied by two: $\Rightarrow N_{Rk} = N_{rec} \cdot 2.0$ $V_{Rk} = V_{rec} \cdot 2.0$
- For X-U 16 S12: base material thickness $t_{II,min} = 8 \text{ mm}$ for $t_f \geq 1.5 \text{ mm}$ and $t_{II,min} = 6 \text{ mm}$ for $t_f \leq 1.25 \text{ mm}$
- Other fastened parts: clips, brackets, etc.
- Redundancy (multiple fastening) must be provided.
- Valid for predominantly static loading

Forces of constraint

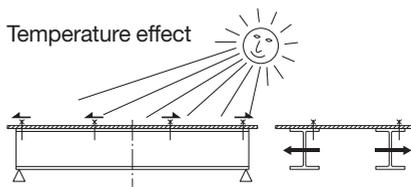

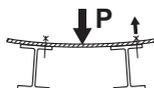

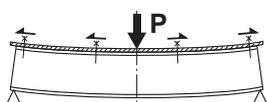

When fastening large pieces of steel, the possibility of shear loadings from forces of constraint should be considered. Avoid exceeding V_{rec} for the fastener shank!

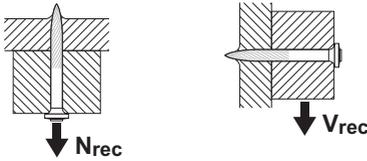

Deflection due to primary loading

Temperature effect

Fastenings of wood to steel

$N_{rec} = 0.3 \text{ kN}$

$V_{rec} = 0.6 \text{ kN}$

Design conditions:

- For safety-relevant fastenings sufficient redundancy of the entire system is required.
- In case soft material is fastened, its strength determines the loads.
- To limit penetration of nail and to increase pull-over load, use nails with washers.
- Observance of edge distance and fastener spacing in compliance with recognized standards, e.g. DIN 1052.
- With respect to details of fastening wood, chipboard or OSB members to steel base material, it is referred to the German approval DIBt Z-14.4-517.

Application requirements

Thickness of base material

Steel:

$t_{II} \geq 6.0 \text{ mm}$ (fastening steel to steel)

$t_{II} \geq 4.0 \text{ mm}$ (fastening wood to steel)

Thickness of fastened material

Steel:

$t_1 \leq 3 \text{ mm}$ (fastened material not pre-drilled)

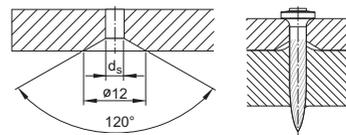

$t_1 \leq 6 \text{ mm}$ (fastened material pre-drilled)

Wood:

$t_1 = 15\text{--}57 \text{ mm}$

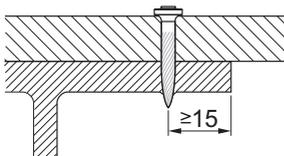

Condition for thick fastened steel parts ($t_1 > 3 \text{ mm}$)

If a gap between the fastened part and the base material is unacceptable, the fastened part needs to be prepared with drilled holes.

Edge distance

Rolled shapes:

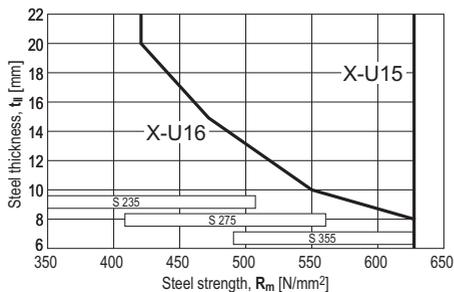

Edge distance: $c \geq 15 \text{ mm}$

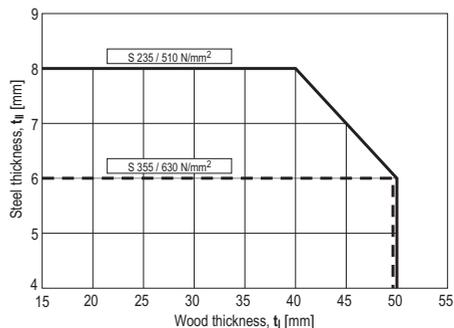

Application limits

Fastening to steel

Fastening of steel sheets and steel parts to steel

Fastening of wood and soft material to steel

X-U 16 P8, X-U 15 P8TH: For steel sheeting with $0.75 \text{ mm} \leq t_1 \leq 1.25 \text{ mm}$ sheets

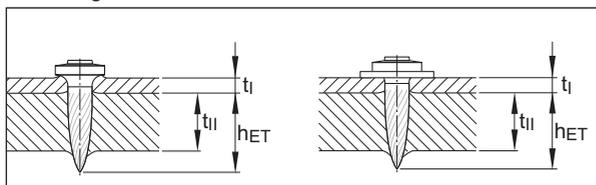

for X-U 22 P8 to X-U 62 P8

Fastener selection and system recommendation

Fastening to steel

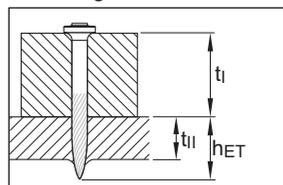

Required nail shank length: $L_S = h_{ET} + t_1$ [mm]

Fastening steel to steel

Recommendation: $h_{ET} = 12 \pm 2 \text{ mm}$

Fastening wood to steel

$h_{ET} \geq 8 \text{ mm}$

Cartridge recommendation

Tool energy adjustment by setting tests on site

Fastening wood to steel: **6.8/11M green or yellow cartridge**

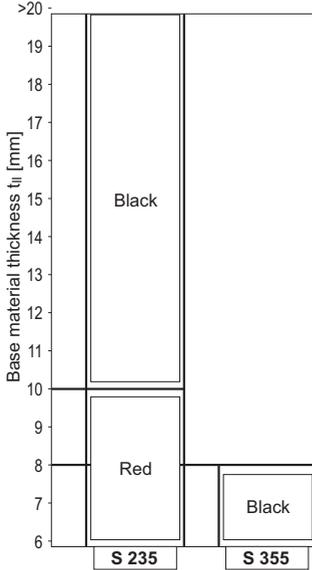

on steel thickness $t_{1l} < 6 \text{ mm}$

6.8/11M yellow, red or black cartridge

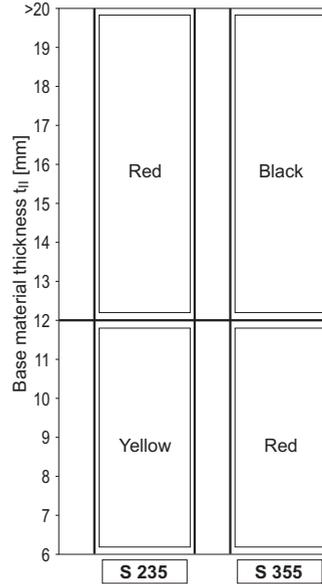

on steel thickness $t_{1l} \geq 6 \text{ mm}$

Fastening steel to steel: **6.8/11M cartridge**

X-U 16

X-U 15 P8TH

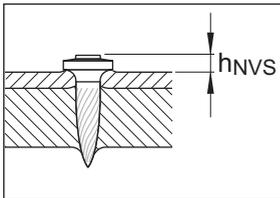

Fastening quality assurance

Fastening inspection

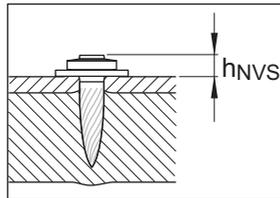

Fastening to steel

X-U __ P8/MX/MXSP

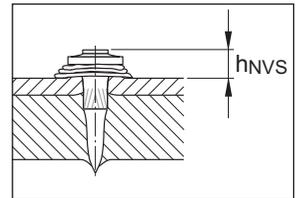

$h_{NVS} = 2.5-4.5 \text{ mm}$

X-U __ S12

$h_{NVS} = 4.0-5.5 \text{ mm}$

X-U __ P8TH

$h_{NVS} = 4.0-6.0 \text{ mm}$
